Returns and statistics are based on Digital Leaders' NAV (RH share), a sub-fund of Finaltis Funds SICAV and the MSCI World NR (Ticker Bloomberg : NDDUWI Index) daily returns from 30 December 2016 (date at which Finaltis took over the management delegation) to this report's date.

MONTHLY COMMENT

Finaltis Digital Leaders increased by +1.0 % in December. The top three contributors of the month are **Tesla**, **Alphabet**, and **Tsmc**, which together brought +2.4%, while **AMD**, **Adobe**, and **Shopify** cost a total of -1.1% during the period.

In December, Tesla continued its climb, making the fund's largest contribution with 150 basis points. The stock has jumped more than +61% since the U.S. election, supported by strong financial results and advances in autonomous driving, including version 13 of its Full Self-Driving software. This scheme could soon receive approval from the federal government and transform the transport industry. Faced with a record valuation, we have slightly lightened our position to secure gains, while remaining confident that Tesla will be the 2025 leader in AI in the physical world.

Alphabet also contributed positively, with 57 basis points. The company introduced Willow, a revolutionary quantum chip capable of solving a major problem related to the handling of qubit errors, a key element of quantum computing. This innovation could accelerate the development of artificial intelligence, thus consolidating Alphabet's position.

In contrast, AMD subtracted 51 basis points from the fund's performance. Slowing demand for consumer electronics and increased competition with Nvidia for AI processors weighed on investors. Nevertheless, we remain confident in its growth thanks to more affordable processors than Nvidia's, the release of a new GPU in January 2025, and its collaboration with Sony. We have thus strengthened our position following the decline in its valuation.

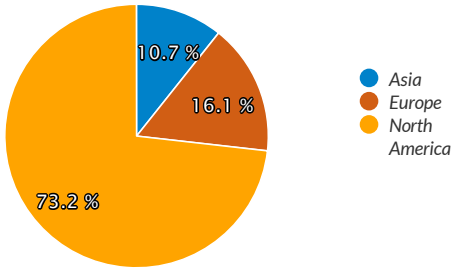

Finally, Adobe contributed negatively due to lower-than-expected margin forecasts for 2025 and increased competition from generative AI-based video creation solutions, such as OpenAI's Sora. However, we remain confident that Adobe remains a go-to platform for content creation, with an ecosystem widely adopted by professionals.
